PROJECT AND INTERNSHIP

Major Project

- Object Detection

Object Detection—is a browser-based real-time object detection, system Experienced in object detection, a key area of computer vision involving both classification and localization of objects. Skilled in detecting multiple real-world objects by drawing bounding boxes and assigning labels, enabling models to identify not just what is present but also where it appears within images or video frames.

Internship

- Artificial Intelligence and machine Learning

Completed an AI/ML internship with hands-on experience in developing, implementing, and deploying machine learning models. Applied AI/ML techniques to real-world challenges.. Explored use cases across healthcare, finance, autonomous systems, and personalized platforms, while strengthening practical problem-solving and decision-making skills.
